

MESOSPHERE SERVICES: HEALTH CHECK

Overview

Mesosphere provides a range of consulting services to help customers accelerate their adoption of Mesosphere DC/OS, a production-proven platform to easily deploy and elastically scale containers and big data services seamlessly across on-premise hardware and and public cloud instances. Mesosphere works closely with our customers to ensure they are successful designing, deploying and operating a DC/OS environment. Access to Mesosphere's knowledge, experience and operational guidance allows customers to avoid common pitfalls and decrease time to market.

Health Check

The Health Check offering allows customers that have already put Mesosphere DC/OS into production to perform a health check on their DC/OS platform and operational practices. During the 5-day engagement, Mesosphere conducts a thorough review of operations practices and administrative activities necessary to efficiently operate Mesosphere DC/OS.

Typical Activities:

- Perform an operations best practice evaluation
- Review centralized logging
- Review centralized system statistics
- Review system capacity utilization
- Validate supported software versioning
- Review upgrade recommendations

Deliverables:

- Health Check Engagement summary document

About Mesosphere Enterprise DC/OS

Mesosphere brings enterprises the power of cloud native technologies, with the control to run on any infrastructure — datacenter or cloud. Mesosphere DC/OS is the only production-proven platform that powers both modern app components — containers and data services — so businesses can accelerate time to market with confidence, and save. Based on Apache Mesos, DC/OS is trusted by Verizon, Autodesk, Charter, Esri and many other Fortune 1000 companies.
